

This kit consists of a; **Wise RS232 Interface, Wise Switch Receiver 240V & Wise LPV-20-5 Interface 5V**

The **Wise Switch Receiver** is a single circuit switching unit rated at 1000 watts. It **cannot** be dimmed.

The receiver is small enough to be placed in many locations, for example, in the ceiling through a downlighter hole, in the wall either through it, behind a recessed light fitting or in a surfaced mounted fitting. The receiver should be placed in a suitable insulated box.

It can be fitted into a small waterproof box to allowed it to be used outside for your garden lighting, garage doors and water features.

The receivers are designed to be simple to install, easy to use and most importantly, reliable. Any of the Wise 868 switches can be used with this receiver, including the remotes and modules. This receiver can also be used in conjunction with the other Wise receivers.

The **Wise RS232 Interface** is used as a way of communicating between the wise controls system and other AV equipment.

Works with:

- Wise Recievers
- Control 4
- Creston
- Lutron
- Mode
- RTI

Software drivers are available from Janus Technology. Please go to the link below to download them
